## POLICY STATEMENT ON ENERGY

---

As energy is a key input to our production processes, we are committed to using it efficiently and reducing our consumption. and We commit to the following in line with Goal 7 “Accessible and Clean Energy” of the United Nations Sustainable Development Goals, national and international laws, and the Energy Management System (EnMS) requirements:

- We use energy, raw materials, and natural resources effectively, efficiently and actively seek to reduce our consumption.
- We manage energy usage according to relevant standards, legal, and other requirements.
- We consider energy and climate change implications in new investments.
- We perform regular audits and continuously improve energy management standards.
- We raise employee awareness and competence on energy use and efficiency through training on energy management and climate change.
- We use resources efficiently, create, review and improve processes to improve energy efficiency and achieve our efficiency targets and energy management performance goals in all our activities.
- We reduce our reliance on fossil fuels, foreign energy dependency and greenhouse gas emissions by investing in renewable and clean energy.
- We ensure the supply of energy-efficient products and services.
- We encourage suppliers to supply energy-efficient products, equipment, and services, and consider energy efficiency in the transportation of production-based material components.
- We share our energy policy with all stakeholders, and use feedback to improve our systems and processes.
